

It's More Than A Payment Solution. It's A Profit Solution.

INTEGRATED APPLICATIONS

BuyerQuest

All businesses want a secure payment solution that is completely seamless while both mitigating fraud and increasing profit. Introducing BuyerQuest.

Sending payments can be difficult to navigate and fraught with potential for disaster. Sensitive customer data can be hacked or stolen, leading to headaches for all parties in resolving these issues, not to mention the loss of potential profits or repeat customers. Risk mitigation can be time consuming and costly. Additionally, banking relationships can be damaged or ruined in the event of a breach. Who needs all of that hassle when all you want to do is grow your business?

BuyerQuest addresses all of these issues, and then some. With BuyerQuest, your payment is secure, as sensitive data is never stored within your systems. CenPOS tokenizes confidential customer data, converting payment information into a secure token stored in the BuyerQuest Marketplace. Real-time Consumer Authentication, AVS- and CVV-verification give you full control of risk mitigation. Charges can be accepted or declined by CenPOS and BuyerQuest based on parameters you set. With BuyerQuest you are in control.

CenPOS + BuyerQuest payment modules

The Integration Advantage

Benefits of BuyerQuest

- Accepts all tender types, including Visa, Mastercard, American Express, P-Cards, ACH, E-check and other alternative payments
- Access via multiple channel delivery, such as 24/7 online portal, email and electronic consumer/franchisee wallet
- 100% supplier funding, free to a franchisee or sponsoring organization
- Manage transactions and interchanges to ensure transaction quality for best rate
- Streamline reconciliation of all transactions with online real-time transaction matching
- Authenticate online consumers to shift chargeback risk to the card issuer, decrease costs, and increase approval rates
- Reduce the cost of acceptance with dynamic transaction routing
- Lower cost per transaction with CenPOS automatic behind-the-scenes partial authorization
- Maintain existing banking relationships

Integrate BuyerQuest into your system now, and give peace of mind to your customers as well as to yourself that your transactions are safe and secure.

Features

- **Next Generation User Interface** This eCommerce inspired interface promotes user adoption and satisfaction with the latest responsive features end users can enjoy from any mobile device. Powerful branding and consistent color schemes are some of the factors that will transform your software into a fully branded university owned marketplace.
- **Predictive Search for Products and Documents** The most powerful search functionality in the P2P market. It will automatically populate to provide search term recommendations based on what you enter in the Search Text Box.
- **Search Results Can Be Refined With Product Specific Filters** Find exactly what you're looking for with filterable search results. Filter options are specific to search results, allowing the buyer to select from a series of supplier provided attributes to further narrow results.
- **Compare Products From Multiple Suppliers** Easily select items from multiple vendors to compare in order to make a sound purchase.
- **Configurable Products** From the Product Details page, the buyer has the ability to configure their product by selecting required options from the supplier. Pricing updates as options are selected.
- **Bundled Products** Creates bundles consisting of a configurable product from one supplier and accessories from various other suppliers. Bundling items allows your buyers to be guided toward the most cost-effective options.
- **Configurable Forms** Administrative users can choose what type of input the end users use for each particular field, such as text field, radio buttons, etc. There is no limit to the amount of forms that can be created in the system.
- **Approval Engine** Administrators can quickly add approval rules to specific customer groups or the entire system in minutes, accounting for the agility needed in fast paced environments. End users can add approvers or watchers to the approval chain with the click of a button.
- **Complex Accounting Made Simple** A set of account split features designed specifically for the complexities of higher ed accounting. The system validates each configuration in real time time before the buyer can proceed to checkout. Accounting configurations can be saved as "favorites" to save time and add efficiencies.
- **Requisition Summary** This requisition summary is created for all documents and shows product details, workflow status and a detailed history. The user can locate all related documents with a "Related Records" link provided by all documents.
- **Business Enabled Invoice match Rules** Administrators can quickly and easily establish or modify invoice match rules from the BuyerQuest Administrative Panel, using simple "if...then" logic to define match rules.
- **Spend Overview and Performance Analytics** Spend Overview provides a breakdown of PO Spend by Supplier and PO Spend by Category, with a snapshot of PO spend, number of orders and number of suppliers, along with colorful pie charts to aid in the visual overview. Performance Analytics applies behavioral, big data and machine learning technologies to your datasets and extracts valuable insights into the Procure-to-Pay patterns and trends across your supply chain.

CenPOS enables you to provide your customers with a complete frictionless payment experience allowing the end-consumer to pay however they want to pay, from wherever they want to pay.
