

# It's More Than A Payment Solution. It's A Profit Solution.

## INTEGRATED APPLICATIONS

# Infor

CenPOS delivers the most secure and seamless cloud-based omnichannel payment solutions in the marketplace. Like every CenPOS solution, yours will be customized to your individual needs –to streamline acceptance across all payment channels; provide a better customer experience; generate maximum revenue while reducing losses due to fraud and human error, and improve your businesses profitability.

Fully Integrated with Infor Distribution ERPs, CenPOS delivers the end-to-end payment capabilities in today's fast-track age of commerce demands. Let us tailor a solution for you that operates in complete concert with your current banking relationships and powers profitable growth with reliable performance, transaction after transaction.

*"We have enjoyed the seamless transition to CenPOS and settle all qualifying Level III transactions without problems through our Infor Distribution SX.e and Storefront since August 2012. Enjoying the financial benefits associated with this solution has saved us about 18% on a monthly basis. The level of professionalism, service, and knowledge from the CenPOS staff is like nothing I have ever experienced from other companies in this industry."*

– Don Green, Choctaw-Kaul

# CenPOS + Infor payment modules

## The Integration Advantage

### Unmatched Security

Secure your valuable consumer payment data to ensure that sensitive information is never transmitted nor stored within your systems to protect against data security breaches that cost the average business \$188 per card according to the Ponemon Group.

### EMV Certified

Protect your business from card-present chargeback risk, which cost merchants an additional \$5.8 billion in 2016 according to Aite Group, by employing EMV (chip card) certified devices configured to seamlessly operate with your ERP.

### Mitigate Fraud On Your Terms

Take advantage of Consumer Authentication to shift fraudulent card liability to the card-issuing bank and reduce the cost of acceptance on consumer-initiated transactions without increasing buying friction. Take full control of risk parameters to maximize profitability using the real-time address (AVS) and card (CVV) verification to automatically accept or decline charges based upon your comfort level.

### Zero Disruption Of Banking Relationships

Preserve your existing banking relationship and the beneficial agreements that you've worked so hard to establish. CenPOS is an agnostic payment engine that works with any bank, vendor or partner.

### Tokenize Customer Data For Easy And Flexible Customer Billing

Streamline your order processing and reduce buying friction as CenPOS converts payment data into a secure token or 'payment method on file' for safe and convenient recurring billing of regular customers.

### Reduce Your Cost of Acceptance

Boost profits by driving down the cost of acceptance as every transaction is intelligently routed for maximum time and cost efficiency. You'll save up to one third in interchange fees! With CenPOS and Infor, those unmanageable costs are suddenly very manageable.

### Lower Your Cost Per Transaction

Improve the consumer shopping experience while lowering processing costs. "Pick and Ship", back orders, and 'received on account' transactions, the authorization amount and settlement amount often don't match. This leads to downgraded, expensive transactions, while you 'hold' the customer's money. CenPOS solves this problem by working behind the scenes to perform a partial authorization release at the time of settlement, thus ensuring a properly qualified transaction. This results in lower costs without changing the user experience.

### Easily Integrate your 3rd party applications

Enable secure acceptance across channels and applications to deliver a seamless consumer shopping experience. Does your business have a custom e-commerce solution or operate something other than Infor Storefront or Rhythm? CenPOS' hosted payment objects allow for easy and secure enablement of payment acceptance.
