It's More Than A Payment Solution.
It's A Profit Solution.

INTEGRATED APPLICATIONS

Microsoft AX

Microsoft Dynamics 365

CenPOS delivers the most secure and comprehensive cloud-based payment solutions in the marketplace. CenPOS is built to work with and around your business needs. CenPOS Enterprise for Microsoft AX is customized to streamline payment acceptance through a variety of payment types; provide a better customer experience for the consumer; and generate maximum revenue with every transaction processed, all while eliminating fraud and human error. Simply put, our integrated payment solution delivers an end-to-end seamless payment experience, enabling you to sell more products and services to more customers with less friction, less cost and less risk, allowing you to focus on growing your business. CenPOS operates in complete concert with your current banking relationships and increases profits with the most reliable performance for every transaction. No need to jump through hoops. CenPOS delivers seamless integration.

CenPOS + Microsoft AX payment modules
The Integration Advantage

Unmatched Security

Sensitive card data is never transmitted nor stored within your systems, which means your customers' secure data won't be compromised. Fully compliant and certified with PCI Data Security Standards, you can avoid costly network segmentation and lower attestation costs with CenPOS's validated Point-to-Point Encryption technology. Giving your customers that feeling of security cannot be replaced.

Mitigate Fraud on Your Terms

The EMV certified solution, coupled with real-time AVS and CVV verification, gives you full control of risk mitigation. Decide the risk level you're comfortable with and CenPOS implements it with flawless precision. CenPOS's powerful consumer authentication service mitigates unnecessary fraudulent chargebacks. Your solution will automatically accept or decline charges based on the parameters you set. People make mistakes, CenPOS does not.

Zero Disruption of Banking Relationships

CenPOS is an agnostic payment engine that works with any bank, vendor or partner. We understand how important existing relationships are so we would never ask you to terminate or alter the beneficial agreements you've worked so hard to establish. Integrate easily and strengthen the relationships you have worked to establish.

Tokenize Customer Data for Easy and Flexible Customer Billing

CenPOS converts payment data into a secure token, which is then stored in your Microsoft AX ERP for the safe and convenient repeat sales of regular customers. Create electronic authorization forms in a fully compliant manner for stored customer credentials, which further reduces your PCI burden. Customers will appreciate the ease and security of the transaction, and will remember it next time.

Reduce Your Cost of Payment Acceptance

Every transaction is intelligently routed for maximum time and cost efficiency. With CenPOS Enterprise for Microsoft AX, those unmanageable interchange costs are suddenly very manageable.

Lower Your Cost Per Transaction

In "Pick and Ship", back orders, and 'received on account' transactions, the authorization amount and settlement amount often don't match. This leads to downgraded, expensive transactions and costly backtracking. CenPOS Force Management solves this problem by working behind the scenes to perform a partial authorization release at the time of settlement, thus ensuring a properly qualified transaction. This results in lower costs without changing the user experience.

Increased Operational Efficiencies

All transactions are posted within the appropriate general ledger in Microsoft AX in real time, thus eliminating lengthy and costly reconciliation processes. Error recovery processes mitigate double posting mistakes and improves the payment collection process. This all adds up to more time to grow your business.

Grow Revenue Across All Channels

Customers shop across all channels that are easily accessed by CenPOS. Whether providing fully EMV-card compliant face-to-face chip card transactions, pushing invoices to consumer devices, enabling an Apple-like mobile POS experience, or an Amazon-like e-Commerce experience—CenPOS give you the power to offer services that yur customers expect. No matter how your customer shops, purchases in one channel update other channels automatically to ensure that every penny is collected- nothing more and nothing less. Following the purchase, consumers receive printed or emailed receipts, giving them peace of mind and higher probability of repeat business.

All Tender Types Fully Integrated

Visa, MasterCard, Discover, American Express, ACH, Cash, E-check and Alternative Payments

CenPOS enables you to provide your customers with a complete frictionless payment experience allowing them to pay however they want to pay, from wherever they want to pay and from where ever they want pay.

CenPOS enables you to provide your customers with a complete frictionless payment experience allowing the end-consumer to pay however they want to pay, from wherever they want to pay.
